

KENNEDY
UNIVERSITY

INTEGRATED BACHELOR + MASTER in Cyber Security AI

Course Objective

The Integrated BSCS + MSCS in Cyber Security is an accelerated 15-month dual-degree program that lets you earn both a Bachelor of Science in Cyber Security (BSCS) and a Master of Science in Cyber Security (MSCS) through an intensive academic and industry-driven curriculum. It covers the full spectrum from IT foundations, secure systems, network defence, ethical hacking, and SOC operations to advanced cloud security, research methods, and leadership skills, including internships and hands-on labs, preparing you for high-demand roles such as security engineer, penetration tester, SOC analyst, cloud security specialist, and cybersecurity leader—all with internationally accredited degrees.

Earn 3 Global Certifications

Course Syllabus

Module 01

IT Foundations, Secure Systems & Career Readiness (UG Core) -

What you'll learn:

- P|ITFP – Professional IT Fundamentals Program - Hardware, OS, Networks & Servers foundation
- P|SCSPA^{AI} – Professional Secure Computer Systems - Security foundations and secure computing practices
- P|SOCAPA^{AI} – SOC Analyst Foundations - Security Operations Center awareness and fundamentals
- Basic Soft Skills & Career Foundations - Communication, teamwork, and employability readiness

Assessment: Internal Assessments, Practical Labs, Assignments & Quizzes

Module 02

Network Defense, Ethical Hacking & Applied Cyber Labs (UG Advanced) -

What you'll learn:

- P|NDPA^{AI} – Professional Network Defense Program - Network security and defense strategies
- P|EHCOPA^{AI} – Ethical Hacking & Cyber Offense - Ethical hacking and penetration testing
- OWASP Top 10 & Web Application Security - Web application security vulnerabilities and mitigations
- Applied Cyber Labs, Case Studies & Simulations - Hands-on practical cybersecurity scenarios
- Internship / Live Project – I - First industry internship experience

Assessment: Lab Evaluations, Practical Assignments, Scenario-Based Testing

Module 03

Advanced Cyber Security, Cloud & Postgraduate Core (PG Level) -

What you'll learn:

- P|SCSPA^{AI} – Advanced Secure Systems (PG Perspective) - Advanced security concepts at postgraduate level
- P|SOCAPA^{AI} – Advanced SOC Operations - Advanced Security Operations Center management
- P|CSPA^{AI} – Professional Cloud Security Program - Cloud security architecture and best practices
- Cyber Security Research Methods & Technical Writing - Research methodology and academic writing

- Internship / Industrial Project – II - Second industry internship or industrial project

Assessment: Research Projects, Practical Assessments, Internship Evaluation

Module 04

Specialisation, Forensics / Pentesting & Executive Leadership -

What you'll learn:

- P|A^{PTP}_{AI} – Advanced Penetration Testing - Specialisation Option A
- P|D^{FIP}_{AI} – Digital Forensics & Investigation - Specialisation Option B (Choose One)
- P|H^{ISO}_{AI} – Professional Head Information Security Office - CISO-level strategic security leadership and governance
- Advanced Soft Skills, Leadership & Governance - Executive leadership and governance readiness

Assessment: Final Presentation, Viva Voce, Leadership Assessment
