

Advanced Diploma in Cybersecurity

India's Top-Rated Practical Cybersecurity Diploma. Master AI-driven ethical hacking, defend against live cyber threats, and step into a high-growth career with our comprehensive roadmap.

Curriculum Roadmap

A step-by-step path from basics to advanced cybersecurity mastery.

MODULE 00

4 Hours

ICE Breaker, Program Kick-off & Orientation

Your journey into a high-growth cyber security career begins from Day One. The ICE Breaker & Orientation session is a power-packed 4-hour onboarding experience designed to align learners with industry expectations, global certifications, and a clear career roadmap—before core technical training begins.

- Interactive introductions to build confidence and collaboration
- Alignment on learning discipline, ethics, and performance standards
- Introduction to eHack Academy
- Academic, university, and industry partnerships
- Guided walkthrough of the EC-Council LMS
- Cyber Security-specific resume building
- Clear understanding of the Master's Program structure
- Setting expectations for real-world cyber security careers
- Overview of EC-Council
- Industry-aligned curriculum with real-world relevance
- Transparent evaluation, exam pattern, and certification process
- Smart job application strategies and LinkedIn optimization

P|CSF - Cybersecurity Fundamentals Program

Build a strong foundation in IT essentials covering hardware, operating systems, networking, servers, and cloud technologies.

- Computer Hardware & Architecture
- Networking Fundamentals
- Server Administration Basics
- Virtualization Technologies
- Operating Systems (Windows/Linux/Mac)
- TCP/IP & Network Protocols
- Cloud Computing Concepts
- Basic Troubleshooting

P|SCSP - Secure Computer Systems Program

Learn essential cybersecurity awareness and secure computing practices.

- Introduction to Digital Security
- Malicious Software and System Defense
- Security Awareness for Social Media Platforms
- Mobile Device Security Fundamentals
- Operating System Protection Techniques
- Internet Usage Security Practices
- Email Communication Protection Methods
- Cloud Usage and Data Protection

P|NDP - Network Defense Program

Master the protect, detect, respond, and predict approach to network security.

- Network Attacks and Defense Approaches
- Technical Network Security
- Endpoint Protection for Windows Systems
- Endpoint Protection for Mobile Devices
- Administrative Network Security
- Network Boundary and Perimeter Security
- Endpoint Protection for Linux Systems
- Data Security and Protection Controls

Ethical Hacking & Counter Measures

Think like an attacker to defend like a professional. Master reconnaissance, exploitation, and vulnerability assessment.

- Footprinting & Reconnaissance
- Enumeration Techniques
- System Hacking
- Sniffing & Packet Analysis
- Counter Measures & Defense
- Scanning Networks
- Vulnerability Analysis
- Malware Threats
- Social Engineering

MODULE 05

6 Weeks

Penetration Testing / Digital Forensics

Choose between Penetration Testing or Digital Forensic Investigator track based on your career goals.

- Penetration Testing Methodologies
- Network Penetration Testing
- Evidence Acquisition & Analysis
- Report Writing & Documentation
- Web Application Testing
- Computer Forensics Process
- Memory & Disk Forensics

MODULE 06

4 Weeks

OWASP Top 10

Master the OWASP Top 10 web application security risks and learn how to identify, exploit, and mitigate them.

- Injection Attacks (SQL, NoSQL, OS)
- Sensitive Data Exposure
- Broken Access Control
- Cross-Site Scripting (XSS)
- Broken Authentication
- XML External Entities (XXE)
- Security Misconfigurations
- Insecure Deserialization

MODULE 07

2 Weeks

Personality and Softskill Development

Understand the importance of personality in career growth, industry expectations, and placement readiness.

- Self-Awareness & Confidence Building
- Emotional Intelligence (EQ)
- Verbal Communication Skills
- Corporate Readiness & Workplace Ethics
- Attitude, Mindset & Professional Behavior
- Time Management & Productivity
- Mock Interviews – HR & Technical
- Placement Readiness & Career Roadmap

MODULE 08

3 Months

3 Months Internship on real-time projects

Each Master Program student must select ANY TWO advanced projects.

- 1. Network Security & SOC Operations
- 2. Application & Network Security Testing
- 3. Digital Forensics & Incident Analysis
- 4. Cloud Infrastructure Security

Tools You Will Master

Get hands-on experience with industry-standard cybersecurity and IT tools.

Kali Linux

Python

Wireshark

Burp Suite

splunk>

Splunk

Cisco

AWS

Docker

Linux

Bash

GitHub

Node.js
